

Anti-Germ. Anti-Infection. Anti-Spoil.

What Kind Of Anti Are You?

If you're Anti-Germs, Anti-Infection or Anti-Spoil (and who isn't?), antimicrobials are here to protect you in countless ways. Every day, tiny superheroes known as antimicrobials are used to help kill or prevent the growth of bacteria, viruses and fungi. These good chemistries touch many aspects of our daily lives, often without us even realizing it.

You are
Anti-Germ
if:

You frequently use antibacterial hand soaps, gels or foams

You wash your dishes with antibacterial dish soap and disinfect your counters

Antimicrobials do more than just clean – they disinfect and sanitize, helping to stop the spread of germs and disease.

You are
Anti-Infection
if:

You've been cared for in a healthcare or hospital setting

You disinfect frequently touched surfaces

Antimicrobials are among the first line of defense in the battle in helping to fight infections.

You are
Anti-Spoil
if:

You buy textiles and paint that are protected from breaking down

You have wood in your house that it is protected from decay caused by mold and mildew

By extending the life of products you use every day, antimicrobials help us preserve our precious resources.

With the use of antimicrobials, you are doing the right thing to protect yourself and your family. [Learn more at goodchemistryliveshere.com](https://www.goodchemistryliveshere.com).
